   2023 Unsheltered Point-In-Time Count Survey 1
I. Introduction

The Point-In-Time (PIT) count is the annual process of identifying and counting individuals and families experiencing sheltered and unsheltered homelessness within a community on a single night in January, as outlined and defined by the U.S. Housing and Urban Development Department (HUD). HUD requires any community receiving funding from the McKinney-Vento Homeless Assistance Grants, including the Continuum of Care (CoC) and Emergency Solutions Grant (ESG) funding, to conduct a biennial count. The New Mexico Coalition to End Homelessness (NMCEH) has elected to conduct the count annually since 2021.

With two CoCs covering the entire geographic area of New Mexico and with the New Mexico Mortgage Finance Authority distributing ESG funds statewide, both CoCs work with participating communities to implement the PIT counts and meet HUD’s requirements. Each count is planned, coordinated, and carried out locally on the community level.

The count includes:

➢ **Sheltered Count**: the count of people experiencing homelessness who are sheltered in emergency shelter or transitional housing on a single night;

➢ **Unsheltered Count**: uses surveys and street outreach to account for individuals and families experiencing unsheltered homelessness on the night of the count; and

➢ **Housing Inventory Count (HIC)**: an inventory of provider programs within a CoC that provides a total number of beds and units dedicated to serving people experiencing homelessness, and, for permanent housing projects, individuals who were homeless at entry, per the HUD homeless definition. The HIC counts beds in four Program Types: Emergency Shelter; Transitional Housing; Rapid Re-Housing; and Permanent Supportive Housing.

The Sheltered, Unsheltered, and Housing Inventory counts attempt to paint a complete picture of our homelessness response system, with the sheltered and unsheltered counts illustrating the need for services and the HIC demonstrating our capacity for providing those services. By conducting the counts annually, NMCEH hopes to provide better information to service providers, governmental entities, and everyday residents of New Mexico to work together on developing effective and solution-based interventions in addressing homelessness across the state.

This report summarizes the data collected in these respective counts for both CoCs in 2023.

---

1. 2023 HIC and PIT Count of Homeless Persons: Data Submission Guidance (hudexchange.info)
**II. 2023 Point-In-Time Count Methodology**

The U.S. Housing and Urban Development Department (HUD) requires CoCs to select one night during the last week of January to collect data on where people experiencing both unsheltered and sheltered homelessness slept that night. The date selected for this year’s count was Monday, January 30th. NMCEH coordinated activities for the PIT count that lasted up to four days immediately following the night of the PIT, from January 31st through February 3rd.

**Unsheltered Count**

Data was collected from people experiencing unsheltered homelessness by communities statewide by conducting street outreach and completing surveys. NMCEH coordinated a number of street outreach teams and volunteers across the state, canvassing neighborhoods, alleys, parks, high-traffic areas, known encampments and points of congregation, meal service sites, and general service sites to engage and survey people who identified as being in a homeless situation on the night of January 30th. NMCEH developed the survey tool to gather all the data required by HUD. The survey used by both CoCs is included at the end of this report for reference. Completed surveys were entered into an online form which collated the information into a spreadsheet for the organization of responses and data clean-up. This involved performing logic checks on variables to ensure calculated fields were correct, deduplicating entries from individuals who were surveyed more than once, and manually reviewing and correcting spelling errors.

In the Albuquerque CoC, the specific approach to the unsheltered count was to organize the city into zones and group volunteers into teams, with shifts in which they covered each zone, focusing on densely-populated areas.

In the Balance of State CoC, teams were organized by county, and each survey team chose how they would approach surveying their county, utilizing their expertise of the local area.

**Sheltered Count**

The sheltered count represents all people residing in Emergency Shelters (ES) and Transitional Housing (TH) projects across each CoC on the night of the count. For ES and TH projects using the statewide Homeless Management Information System (HMIS), which stores enrollment and demographic data for homeless individuals and families enrolled in projects, data was obtained through HMIS reports and automatically deduplicated. To collect data from projects that do not participate in HMIS, the CoC team reached out to each project individually to have them submit the data manually using a data collection form designed by NMCEH to gather the same information stored in HMIS. Both the HMIS and non-HMIS datasets are combined manually to obtain final totals.

Please note that the Data Breakdown sections for Emergency Shelters and Transitional Housing have not been included in this edition of the report because of data quality issues. For further information on this, feel free to contact the CoC Team through any of the avenues listed at the end of this report.

**Housing Inventory Count**

The Housing Inventory Count reports each project’s current service capacity in terms of bed and unit inventory and the total number of people enrolled in Permanent Supportive Housing (PSH) and Rapid Re-Housing (RRH) on the night of the count. Again, data from HMIS-participating projects was simply pulled from the database, and non-HMIS participating projects submitted their data to the CoC individually, with both data sets being combined to obtain final totals.

**Methodological Limitations**

It was a four-month process of collecting, entering, and validating this data; however, PIT count numbers were submitted or collected by different community members, service providers, and individuals currently experiencing homelessness. Many factors, such as number of volunteers, community engagement, understanding of training, location and time of the survey, and weather can influence the reliability of this count. Additionally, most of this data is self-reported directly by people experiencing homelessness.
The 2023 PIT count reflects a dramatic increase in the reported numbers, particularly in the Albuquerque unsheltered count. There are many reasons to believe that homelessness in New Mexico increased in 2023. Still, it is important to note that the Albuquerque unsheltered count was organized completely differently and more systemically in 2023 than in years past, and the number of surveyors more than tripled. Furthermore, the 2022 count experienced a number of limitations that likely drove the count that year down. The 2022 report noted that “the numbers reflected may be drastically lower than in previous years or show an inaccurate [trend] in data.” So, while homelessness is likely increasing, the degree of that increase shown in the following data, in Albuquerque’s unsheltered count in particular, is likely not reflective of the actual degree of that increase.

Further challenges in 2023 may have influenced both the unsheltered and sheltered counts.

The unsheltered counts in cities for both CoCs were impeded by ongoing decommissioning of homeless encampments - in Albuquerque in particular, an aggressive decommissioning campaign led many surveyors to arrive in their surveying zones, previously identified as having been heavily populated with unsheltered individuals, with no one to survey, the people in the area having been dispersed. This almost certainly helped contribute to an overall undercount in cities.

Furthermore, the surveying approach has its limitations - many individuals experiencing unsheltered homelessness do not have the time or desire to complete a survey, resulting in hundreds of refusals (a figure we tracked for the first time this year) and incomplete surveys. The result is that not every data point adds up to the total number of unsheltered individuals surveyed. Furthermore, the questions used to determine chronic homelessness (questions 3-6) are difficult to navigate in short interactions and street settings, as the specifications can confuse surveyors and surveyees.

The 2023 sheltered count may also be impacted by the fact that NMCEH changed the state’s HMIS provider during 2022, a transition that created several challenges. We have reason to believe that by the time the data was pulled from HMIS it was largely accurate, but there is always a chance that during a large-scale systems change, inconsistencies may occur.

The overall picture is that these counts suffer from many limitations and always have, meaning that tracking trends in homelessness by relying solely on the PIT count may create a distorted picture of the issue. The PIT process is continually being refined and improved. While this is a more accurate count than the state has had in several years, it still represents a dramatic undercount for the reasons detailed above.
III. Albuquerque CoC Results

Overall Numbers
The following data was collected from unsheltered and sheltered people experiencing homelessness and are organized by living situation as captured for January 30th, 2023.

Table 1a - ABQ - Households 2023

**Figure 1 - ABQ PIT Count Over Time**
Total number of people counted during the Albuquerque Point-in-Time counts from 2009 - 2023

![ABQ PIT Count Totals: 2009 - 2023](image)

**Albuquerque Unsheltered Data Breakdown**
- 790 (81%) were considered chronically homeless
- 78 (8%) were veterans
- 387 (40%) were experiencing homelessness for the first time
- 150 (15%) were homeless due to domestic violence
- 488 (50%) were adults with a serious mental illness
- 436 (45%) were adults with a substance abuse disorder

**Figure 2 - ABQ Unsheltered - Gender**

![Gender - ABQ Unsheltered](image)
**Figure 3 - ABQ Unsheltered - Age**

![Age - ABQ Unsheltered](image)

**Figure 4 - ABQ Unsheltered - Ethnicity**

By current reporting standards, HUD classifies Hispanic or Latin(a)(o)(x) as an ethnicity and states that people identifying as Hispanic or Latin(a)(o)(x) can be of any race.
Beginning in late 2023, HUD will include Hispanic/Latin(a)(o)(x) in its race breakdowns. This means that someone identifying as Hispanic/Latin(a)(o)(x) will be counted in their own dedicated racial category. This is particularly significant in New Mexico. For this year’s count, this new way of breaking down the data is only possible for the unsheltered counts. This is that breakdown, which may provide a preview for what race breakdowns will look like going forward in New Mexico.
Figure 7 - ABQ Unsheltered - Tribal Affiliation
Respondents identifying as American Indian or Alaska Native had the option of providing their tribal affiliation, with the following graph depicting those responses.

![Tribal Affiliation - ABQ Unsheltered](image)

**Tribal Affiliation - ABQ Unsheltered**
- Santo Domingo Pueblo: 2.1%
- Hopi: 2.1%
- Choctaw: 2.1%
- Laguna Pueblo: 4.1%
- Isleta Pueblo: 4.1%
- Multiple: 5.2%
- Acoma Pueblo: 6.2%
- Apache: 8.2%
- Unknown: 8.2%
- Navajo/Diné: 49.5%

Total Responses: 97

Figure 8 - ABQ Unsheltered - Transient Homelessness
Respondents could indicate if they were from New Mexico or just passing through. The chart below represents those transient respondents’ state of origin.

- Cuba - 2
- El Salvador - 1
- Germany - 1
- Mexico - 8
- Panama - 1
- Russia - 1
ABQ Unsheltered - Reasons for Not Using Shelters
Respondents were asked, “Why don’t you use the shelter system?” Common themes identified in the qualitative data are below. Note that this data is grouped together from narrative answers. There is overlap between some categories, and many respondents mentioned more than one reason. The most common reasons were that individuals had previous negative shelter experiences, that they had safety concerns including the fear of violence, and that shelters were unhygienic (many respondents mentioning bed bugs and the spread of disease). The most common shelter policy issue was that pets are not allowed, and “accessibility issues” included shelters being too far away or respondents lacking the transportation to reach them. Other accessibility issues included shelters not accommodating people with disabilities or chronic illness, criminal history, linguistic barriers, scheduling policies, and having previously been kicked out of shelters.

➢ Previous negative experiences (121)
➢ Safety concerns (109)
➢ Unhygienic (94)
➢ Stringent shelter policies (88)
➢ Accessibility issues (83)
➢ Criminal activity (51)
➢ Overcrowding (49)
➢ Staff conduct (39)
➢ Impact on mental health (39)
➢ Would rather stay on streets or in car (26)
➢ Separation of households (25)
➢ Like a prison or jail (21)
➢ Substance use at shelters (21)
➢ Uncomfortable/Stigmatized (17)
➢ Don’t know how it works/about shelters (16)
➢ Predatory behavior (sexual assault, rape, etc) (16)

Figure 9a - ABQ Unsheltered - Count Over Time
Count of people experiencing unsheltered homelessness in Albuquerque during the PIT Counts 2009-2023.
Figure 9b - ABQ Unsheltered - Refusals
Measured for the first time in 2023. Please note that this data cannot be deduplicated and should be treated cautiously. Nevertheless, NMCEH feels this count should be included to demonstrate to readers how often unsheltered individuals tell surveyors they are not interested in completing a survey. This is one of the many reasons to believe the PIT is an undercount.

*This data point cannot be deduplicated

Figure 9c - ABQ Unsheltered - Increase in Surveyors vs. Increase in Unsheltered Count
This shows the increase in surveyors conducting the Albuquerque unsheltered count compared to the increase in the unsheltered count. The increase in surveyors helps to explain the magnitude of the growth in the unsheltered count.

V. Discussion: Racial Disparities in Populations Experiencing Homelessness

NMCEH is committed to advancing racial equity across our CoC systems. Aiding these efforts, racial datasets were further analyzed to identify overrepresented populations in our homelessness response systems by comparing the percentages of races collected with the most recently available census data for each CoC’s geographic area.² ³ The following graphs represent the racial disparities identified across both CoCs. The results suggest that further inquiry into both the presence and causes of racially overrepresented populations in our systems is warranted. NMCEH hopes the following information will highlight the importance of addressing this issue and will guide future efforts to promote racial equity. We also recognize the need to determine how people of various races fare once they enter a particular housing program and the importance of identifying possible ethnic disparities in future reports.

VI. Acknowledgments

Together we collaborated to count our neighbors and fellow community members living without fixed, suitable housing. This required many hours of planning and a huge effort by every volunteer. As a state, we came together to provide this important data for our New Mexico homeless services and housing system.

Thank you to all of our partners!
You made the 2023 Point-In-Time count a success.

START HERE: I am doing an anonymous survey today to learn more about the housing status of people in our community. This information is helpful in obtaining needed resources for unhoused members of our community. The survey is completely voluntary and takes only 5-7 minutes to complete. If you choose to participate, you can skip any question that you don’t wish to answer or stop the survey at any time. Would you be willing to take the survey today?

1) Have you already completed a survey about where you stayed on Monday, January 30th?
If they have NOT completed the survey, move on to the next question.
If they have already completed the survey, thank them for their time, and DO NOT move forward with the survey.

2) Where did you stay on Monday, January 30th?
☐ Abandoned Building    ☐ Shed/Garage/Storage Unit    ☐ Bus or Train Station
